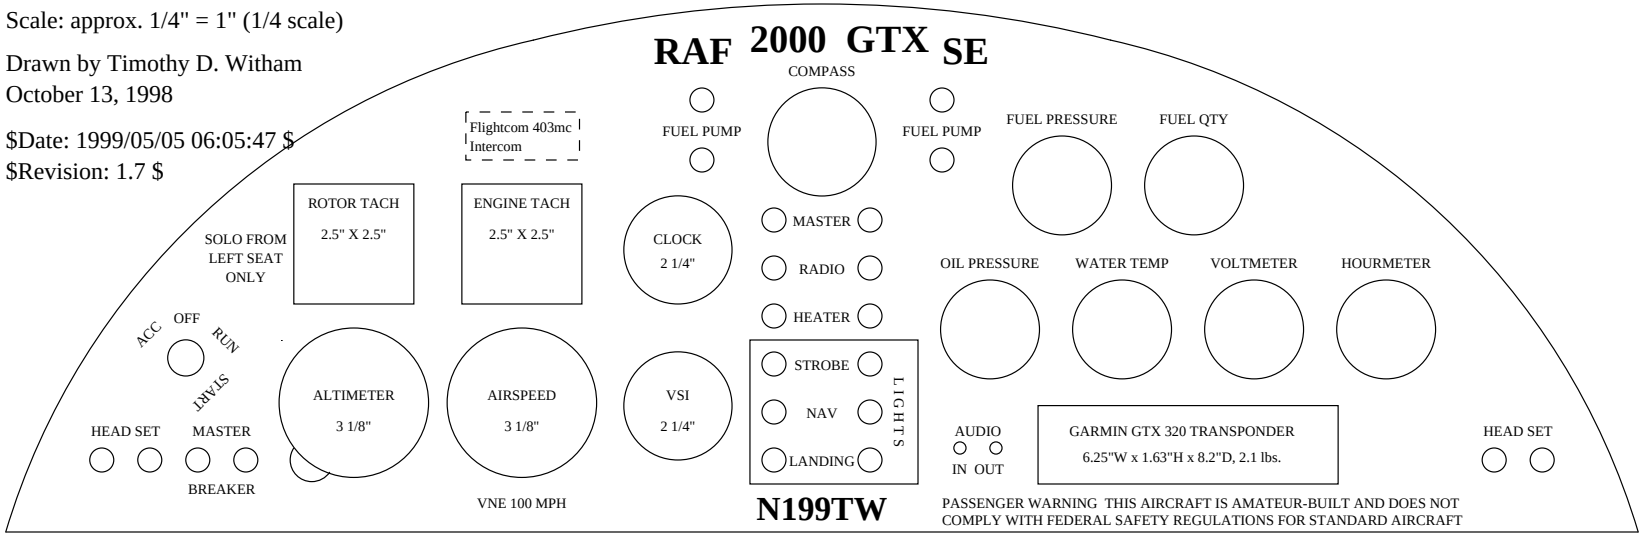
Scale: approx. 1/4" = 1" (1/4 scale)

Drawn by Timothy D. Witham
October 13, 1998

$Date: 1999/05/05 06:05:47 $
$Revision: 1.7 $



NOTES: "RAF 2000 GTX SE" text is curved along the top edge like in the examples.

The Flightcom 403mc is not engraved; it mounts through drilled holes. (2.375"W x 1"H x 2.625"D)

New fuel pressure hole should be same size as the other instrument guages. It provides for testing the redundant pump circuits, kind of like a mag check.

Lower 2 1/4" hole is for Vertical Speed Indicator, depth 3 1/4". Upper is for clock, chronometer, or any other instrument of similar or less depth to clear the heater.

Radio will be a Garmin GPSCOM 190 handheld, mounted at an angle between the panel and the trim box.

N199TW is reserved for one year from October 21, 1998 SOURCE: http://www.quiknet.com/~twitham/gyro/panel.html
